

ABSTRACT

A collapsible, portable canopy is adapted for use with a co-sleeper, crib or play yard. The canopy includes a frame and has at least three canopy support arms pivotally attached to an arm attachment portion. The canopy cover has a central opening at the top that fits over the
5 frame and includes tubular enclosures located on an inner surface of the canopy cover that are open at their upper ends adjacent the opening and fit slidably over the canopy support arms. The central opening has a removable cover. The support arms of the frame are inserted into the tubular members through the central opening. The canopy cover includes an elastic member integral with the surrounding lower edge that urges it and the support arms toward the
10 outer perimeter of a co-sleeper, crib or play yard. The canopy cover is made of mesh material and includes a reclosable opening for interior access.
